

Justin Hathaway

332 Abbey Gardens Ln., Simpsonville, SC | 864-551-3652 | justin@hathaway.cc

OBJECTIVE

To obtain a challenging and rewarding job that allows for the demonstration and development of my skills, experience, and adaptive nature to the field of Front-End Engineering.

SKILLS

- HTML & CSS
- JavaScript
- JQuery
- AJAX
- NodeJS
- Backbone JavaScript Framework
- Ember JavaScript Framework
- Responsive Web Design
- GitHub
- Grid Frameworks(Bourbon/Neat)
- Unit Testing Frameworks(Mocha)

PROJECTS

Restaurant Menu App This is a front end menu application. It allows the user to sort through, add and remove items to and from their own live updating order. It is complete with a list of items on the current order with a running price for all of the items. Once the order is submitted, the items are all sent as a single order to a backend server using Firebase.

Interception This project was my final project for The Iron Yard. It serves as a hub for all fans of college football to congregate to live chat about every game currently active. This application uses a Node server to reach out to Kimono Labs-generated API's to update the Firebase backend dynamically supplying a live feed of information to the client.
